Find average/rms of (DC +AC) signal

- Find the average and RMS value of the following signal

POWER TRIANGLE

- To find the average or RMS value of any form of sinusoidal signal mathematical function = $\sin\omega t$ or $\sin\theta$

The voltage across a load is $v(t) = 10\sin(\omega t + 30^\circ)V$ and the current through the element in the direction of the voltage drop is $i(t) = 2\sin(\omega t + 60^\circ)A$. Find: (a) the complex and apparent powers, (b) the real and reactive powers, and (c) the power factor and the load impedance.
