

Problem Solving Using Python (CSE1012)

Dr. Abdul Kayom, Assistant Professor, SENSE

Agenda / Contents

01 LIST Examples

02

03

04

05

Example1: LIST of factors

- Write a program to find the List of factors of a given number.

Example2: To check if a number is Prime

- Write a program to check whether a number is prime or not.

Example3: LIST

- Write a program to calculate the SUM of all the prime numbers in a List.

Example4: Sorting a list of numbers

- Write a program to sort a given List of numbers.

Example4: Sorting a list of numbers

```
# Bubble Sort Algorithm
```

```
List_num = [1000, -5, 0, 7, 5, 11]
```

```
print('Given List of numbers')
```

```
print(List_num)
```

```
for i in range(0, len(List_num)):
```

```
    for j in range(0, len(List_num) - i - 1):
```

```
        if List_num[j+1] < List_num[j]:
```

```
            (List_num[j], List_num[j+1]) = (List_num[j+1], List_num[j])
```

```
print('The sorted List of numbers')
```

```
print(List_num)
```

Thank You
