Calculate mean, median, std

- Write a program to calculate the mean, median, and standard deviation of a List of numbers.
 - Take numbers from the user (space separated) then make a list.
 - Compute mean, median, standard deviation.

Calculate mean, median, std

- Write a program to calculate the mean, median, and standard deviation of a List of numbers.

```
# Sort the list and print the number at its midpoint
numbers.sort()
midpoint = len(numbers) // 2
print("The median is", end = " ")
if len(numbers) % 2 == 1:
    print(numbers[midpoint])
else:
    print((numbers[midpoint] + numbers[midpoint - 1]) / 2)
```

Calculate mean, median, std

- Write a program to calculate the mean, median, and standard deviation of a List of numbers.

$$\sigma = \sqrt{\frac{\sum (x_i - \mu)^2}{N}}$$

σ = population standard deviation

N = the size of the population

x_i = each value from the population

μ = the population mean

Thank You
