Create an user-defined matrix

Create an user-defined matrix

```
import numpy as np
row = int(input("Enter the number of rows:"))
col = int(input("Enter the number of columns:"))
matrix_L = []
for i in range(row):                                # for row entries
    print("The elements of the row",i)
    temp_L = []
    for j in range(col):                            # for column entries
        temp_L.append(int(input()))
    matrix_L.append(temp)
matrix=np.array(matrix_L)
print(matrix)
```

Create an user-defined matrix

```
import numpy as np
```

```
row = int(input("Enter the number of rows:"))
```

```
col = int(input("Enter the number of columns:"))
```

```
matrix_L = [[int(input()) for x in range (col)] for y in range(row)]
```

```
matrix=np.array(matrix_L)
```

```
print(matrix)
```

Thank You
