

Problem Solving Using Python (CSE1012)

Dr. Abdul Kayom, Assistant Professor, SENSE

Agenda / Contents

- 01 Example Problems on File
- 02
- 03
- 04
- 05

Extract emails from the text in File

- Read a .txt file with emails embedded in the text
- Extract only the emails

Extract emails from the text in File

```
import re
file=open("emails.txt","r")
for line in file:
    text=str(line)
    findEmails = re.findall(r'[\w\.-]+@[\w\.-]+', text)
    print(findEmails)
file.close()
```

Thank You

Dr. Abdul Kayom
